SUMMARY TABLES:	
Imports into Canada for Consumption, by Countries	4
Imports into Canada for Consumption, by Main Groups	6
DETAILED TABLES:	
Imports for Consumption, by Articles and Countries:	
Agricultural and Vegetable Products (except Chemicals, Fibres and Wood):	Class Number
A - Mainly Food	1 to 390
B — Other than Food	1501 to 1846
Animals and Animal Products (except Chemicals and Fibres)	2012 to 2348
Fibres, Textiles and Textile Products	3001 to 3576
Wood, Wood Products and Paper	4002 to 4311
Iron and Its Products	5001 to 5738
Non-Ferrous Metals and Their Products (except Gold)	6001 to 6260
Non-Metallic Minerals and Their Products (except Chemicals)	7001 to 7304
Chemicals and Allied Products	8001 to 8950
Miscellaneous Commodities	9000 to 9275

VALUE AND VOLUME at end of report

EXPLANATORY NOTES

- 1. Source of Data. Statistics of imports are based upon the declarations of importers (import entries) as subsequently checked by customs officials.
- 2. Valuation. The value of goods imported is the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing on the date at which the goods were actually despatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f.o.b. point of shipment in the country of export.
- 3. Units of Quantity. Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are items such as "engines, gas, n.o.p., and parts" which show a quantity in "number" as well as value. In these items the "number" refers only to the number of substantially complete articles imported, while the value includes also the value of any parts of the article imported. For such items the average value per unit cannot be ascertained.

- 4. Coverage. Statistics of imports include all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series, therefore, includes goods which are cleared by customs immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.
- 5. Exclusions. Import statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the article. A small amount of gold scrap in the form of jewellers' sweepings is also included. Some goods for the use of United States forces stationed at treaty bases in Canada are excluded, as are ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, and Canadian-owned military equipment returned to Canada.
- 6. Countries Credited. Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. This class of imports is credited to the country in which the goods originated.

- 7. Time Periods. Import statistics for any month include all goods declared on import entries received at the Bureau of Statistics during the calendar month in question.
- 8. Abbreviations. Many descriptions of countries and articles used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all articles appear in Volume III of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for".
- 9. Revisions. All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.

KEY TO ABBREVIATIONS OF COUNTRIES

Note:— The classification of Countries with a statement of the territorial limits used for statistical purposes will be found in Volume I of the Annual Report of the Trade of Canada.

Value, Price and Volume Indexes of Imports for Consumption

The following table gives index numbers of the déclared (statistical) value of imports for consumption by months, and of the unit value (price) and volume of these imports. The value index expresses the value of imports in a given month as a percentage of the monthly average in the base year. The price index is of the fixed-weight aggregative (Laspeyres) type, and combines unit values calculated from the monthly import statistics with specified wholesale or other price quotations. These latter quotations are used where inadequate quantity reporting or insufficiently homogeneous items in the trade statistics prevent the obtaining of sufficiently representative unit value series. The volume index is derived by dividing the value index by the corresponding price index, and is, therefore, of the currently-weighted (Paasche) type. These indexes are computed with 1948 as an interim reference base pending conversion to the Bureau's official post-war reference base (1949).

In computing the price index certain adjustments were made to the regular grouping of commodities used in the trade statistics, and all three indexes are presented on the basis of these adjusted groups. The chief adjustments are as follows: the two groups "agricultural and vegetable products" and "animals and animal products" have been combined into one group now titled "agricultural and animal products"; the sub-group "rubber and its products" (1678-1732) and the item "advertising matter" (4291) have been transferred to the "miscellaneous products" group; the item "arms, etc., British or N.A.T.O. countries" (9196) has been deducted from the "miscellaneous products" total and the grand total; three "ships" items (9155-57) have been transferred to the "iron and steel and their products" group; and a few other adjustments designed to improve group classification by component material have been made.

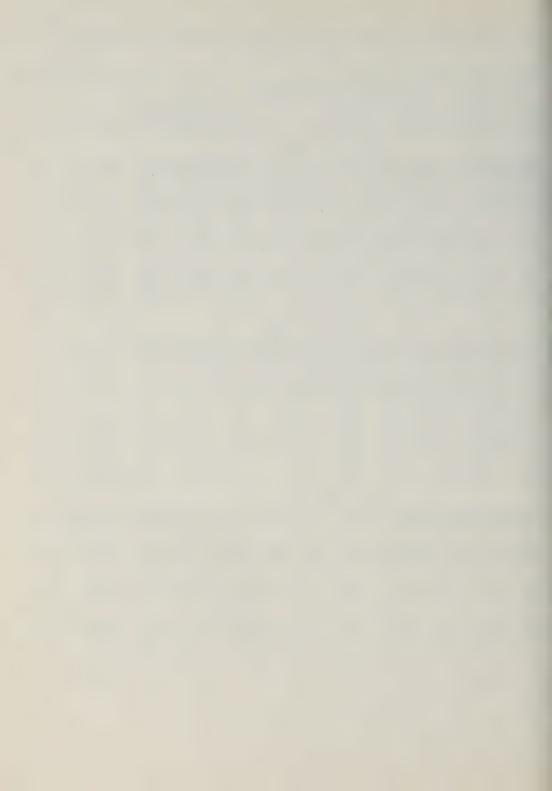

These indexes are currently computed from the original data for months, quarters and calendar years. Approximate indexes for other periods may be obtained by averaging the monthly values. Although such indexes will be less accurate than would result from a separate computation based on the original data, the margin of error is insufficient to necessitate a lengthy separate computation.

A complete record of these series by months for the post-war period is published in issues of Volume I of the annual report "Trade of Canada". Some additional commodity information appears in issues of the "Review of Foreign Trade". Details of the computation of the price indexes are given in D.B.S. Reference Paper, No. 8, 1950, titled "Export and Import Price Indexes by Months, July, 1945 – June, 1950 (1948=100)".

Non-Metallic Minerals and Their Products (except Chemicals)	7001 to 7304
Chemicals and Allied Products	8001 to 8950
Miscellaneous Commodities	9000 to 9275

VALUE AND VOLUME at end of report

EXPLANATORY NOTES

- 1. Source of Data. Statistics of imports are based upon the declarations of importers (import entries) as subsequently checked by customs officials.
- 2. Valuation. The value of goods imported is the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing on the date at which the goods were actually despatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f,o,b, point of shipment in the country of export.
- 3. Units of Quantity. Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are items such as "engines, gas, n.o.p., and parts" which show a quantity in "number" as well as value. In these items the "number" refers only to the number of substantially complete articles imported, while the value includes also the value of any parts of the article imported. For such items the average value per unit cannot be ascertained.

- 4. Coverage. Statistics of imports include all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series, therefore, includes goods which are cleared by customs immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.
- 5. Exclusions. Import statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the article. A small amount of gold scrap in the form of jewellers' sweepings is also included. Some goods for the use of United States forces stationed at treaty bases in Canada are excluded, as are ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, and Canadian-owned military equipment returned to Canada.
- 6. Countries Credited. Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. This class of imports is credited to the country in which the goods originated.

- 7. Time Periods. Import statistics for any month include all goods declared on import entries received at the Bureau of Statistics during the calendar month in question.
- 8. Abbreviations. Many descriptions of countries and articles used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all articles appear in Volume III of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for".
- 9. Revisions. All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.

KEY TO ABBREVIATIONS OF COUNTRIES

Note:— The classification of Countries with a statement of the territorial limits used for statistical purposes will be found in Volume I of the Annual Report of the Trade of Canada.

Value, Price and Volume Indexes of Imports for Consumption

The following table gives index numbers of the déclared (statistical) value of imports for consumption by months, and of the unit value (price) and volume of these imports. The value index expresses the value of imports in a given month as a percentage of the monthly average in the base year. The price index is of the fixed-weight aggregative (Laspeyres) type, and combines unit values calculated from the monthly import statistics with specified wholesale or other price quotations. These latter quotations are used where inadequate quantity reporting or insufficiently homogeneous items in the trade statistics prevent the obtaining of sufficiently representative unit value series. The volume index is derived by dividing the value index by the corresponding price index, and is, therefore, of the currently-weighted (Paasche) type. These indexes are computed with 1948 as an interim reference base pending conversion to the Bureau's official post-war reference base (1949).

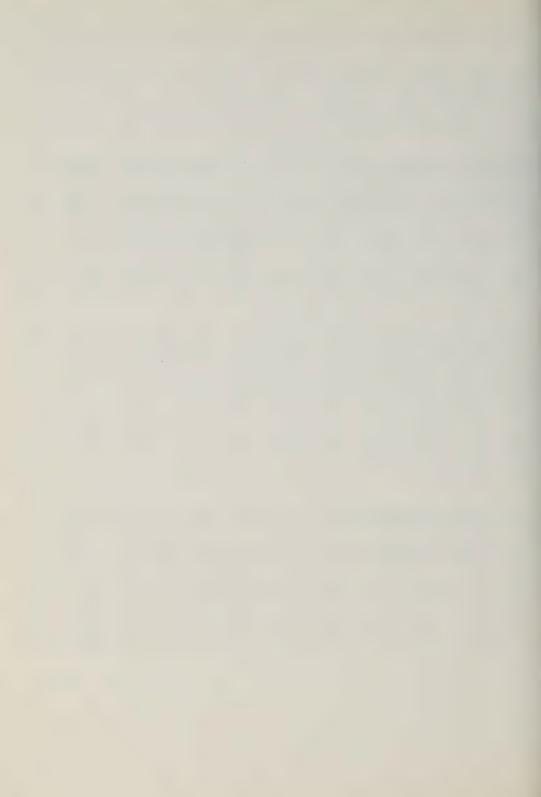

In computing the price index certain adjustments were made to the regular grouping of commodities used in the trade statistics, and all three indexes are presented on the basis of these adjusted groups. The chief adjustments are as follows: the two groups "agricultural and vegetable products" and "animals and animal products" have been combined into one group now titled "agricultural and animal products"; the sub-group "rubber and its products" (1678-1732) and the item "advertising matter" (4291) have been transferred to the "miscellaneous products" group; the item "arms, etc., British or N.A.T.O. countries" (9196) has been deducted from the "miscellaneous products" total and the grand total; three "ships" items (9155-57) have been transferred to the "iron and steel and their products" group; and a few other adjustments designed to improve group classification by component material have been made.

These indexes are currently computed from the original data for months, quarters and calendar years. Approximate indexes for other periods may be obtained by averaging the monthly values. Although such indexes will be less accurate than would result from a separate computation based on the original data, the margin of error is insufficient to necessitate a lengthy separate computation.

A complete record of these series by months for the post-war period is published in issues of Volume I of the annual report "Trade of Canada". Some additional commodity information appears in issues of the "Review of Foreign Trade". Details of the computation of the price indexes are given in D.B.S. Reference Paper, No. 8, 1950, titled "Export and Import Price Indexes by Months, July, 1945 – June, 1950 (1948=100)".

CHANGES IN IMPORT STATISTICAL CLASSIFICATION EFFECTIVE JULY 1ST, 1958

The changes in the Canadian Customs Tariff effective June 18, 1958, necessitated several changes in Canadian import statistics, especially in those relating to primary iron and steel. Many statistical classes formerly related directly to customs tariff items which were abolished and replaced by new tariff items, and it was not practical to continue these statistical classes past June 30. Modifications to some other tariff items required corresponding modifications in the content and description of other statistical classes, and these modifications were made with the same effective date.

The following list of changes in the import statistical classification is divided into four parts. The first deals with statistical classes which could not be continued after June 30, and which do not match closely any of the new classes established as of July 1. In this and subsequent reports for 1958 these classes will be re-numbered and presented under their new code numbers. The statistics shown for these classes will be cumulative figures for the period January 1 - June 30, 1958. The second part of the list deals with cancelled classes which will be included in either new or pre-existing classes. These classes, as such, disappear entirely from this and subsequent reports, but cumulative totals for the period January 1 - June 30, 1958, are included with totals for the classes indicated. The third part deals with the new classes established as of July 1. Cumulative figures for these classes cover only the elapsed period of 1958 subsequent to July 1, except for those classes mentioned in part 2 of the list, and each of these classes will bear an appropriate footnote reference in reports covering the last six months of 1958. The fourth part of the list shows in full the new readings of those statistical classes where modifications in content (or changes in the wording of relevant tariff items) made these desirable.

1. Classes Discontinued After June 30, and Re-numbered for Inclusion in Current Reports (the cumulative figures shown under the new code numbers relate only to the period January 1 - June 30, 1958):

Former Class 5020 5021 5022 5071 5072 5073 5074 5076 5077 5081 5102	New Code 5901 5902 5903 5904 5905 5906 5907 5908 5909 5910 5911	Former Class 5117 5120 5121 5122 5124 5126 5127 5128 5130 5132 5133	New Code 5918 5919 5920 5921 5922 5923 5924 5925 5926 5927 5928	Former Class 5152 5153 5154 5161 5162 5164 5167 5185 5185 5187	New Code 5935 5936 5937 5938 5939 5940 5941 5942 5944 5944 5944 5945

4. New Readings of Modified Statistical Classes:

Class		Unit of
Number	New Reading	Quantity
2096	Lobsters, fresh or boiled	Lb。
2100	Oysters, fresh or frozen	Gal.
5165	Steel masts and parts, structural shapes, and plates and sheets, for ships	Cwt.
5193	Pipes and tubes, steel, with plain ends, for rolls for	
	paper-making machinery	Cwt.
5296	Dairy machinery including power churns, power milk coolers, power fillers and cappers, power ice-cream mixers, power butter printers, power cream savers, power bottle sterilizers, power brine tanks, power milk bottle washers, power milk can washers; ice-breaking machines, valveless or centrifugal milk pumps, sanitary milk and cream vats; not to include	
	motive power; parts of all the foregoing	\$
5581	Fixed or stationary meters, of a size or capacity not made in Canada, for hydraulic engineering; gauges, indicators and recorders for water or other liquid levels, volume or flow, of a class or kind not made in Canada; parts of all the foregoing	\$
6112	Zinc and zinc alloys in pigs, slabs, blocks and anodes.	Cwt.
6113	Zinc and zinc alloys in bars, rods, plates, strip and	
	sheet	Cwt.
6115	Zinc dust and granules	Cwt.
6117	Zinc and zinc alloy slugs, discs and shells	\$
6219	Anodes of nickel, copper, silver or gold	\$
7124	Artificial eyes for human use, and contact lenses and anterior chamber implants for the human eye	\$
9070	Hearing aids and similar appliances for deaf persons, and parts; electronic equipment and parts thereof,	A
9162	when used for ear-training the deaf	\$
ATOS	Buggies, cutters, carriages, animal-drawn pleasure carts, and vehicles, n.o.p., and parts	No.

Fibres, Textiles and Textile Products	
Wood, Wood Products and Paper	
Iron and Its Products	
Non-Ferrous Metals and Their Products (except Gold)	
Non-Metallic Minerals and Their Products (except Chemicals)	
Chemicals and Allied Products	
Miscellaneous Commodities	

EXPLANATORY NOTES

- Source of Data. Statistics of imports are based upon the declarations of importers (import entries) as subsequently checked by customs officials.
- 2. Valuation. The value of goods imported is the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing on the date at which the goods were actually despatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f.o.b. point of shipment in the country of export.
- 3. Units of Quantity. Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are items such as "engines, gas, n.o.p., and parts" which show a quantity in "number" as well as value. In these items the "number" refers only to the number of substantially complete articles imported, while the value includes also the value of any parts of the article imported. For such items the average value per unit cannot be ascertained.

- 4. Coverage. Statistics of imports include all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series, therefore, includes goods which are cleared by customs immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.
- 5. Exclusions. Import statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the article. A small amount of gold scrap in the form of jewellers' sweepings is also included. Some goods for the use of United States forces stationed at treaty bases in Canada are excluded, as are ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, and Canadian-owned military equipment returned to Canada.
- 6. Countries Credited. Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. This class of imports is credited to the country in which the goods originated.

- 7. Time Periods. Import statistics for any month include all goods declared on import entries received at the Bureau of Statistics during the calendar month in question.
- 8. Abbreviations. Many descriptions of countries and articles used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all articles appear in Volume III of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for".
- Revisions. All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.

Value, Price and Volume Indexes of Imports for Consumption

The following table gives index numbers of the déclared (statistical) value of imports for consumption by months, and of the unit value (price) and volume of these imports. The value index expresses the value of imports in a given month as a percentage of the monthly average in the base year. The price index is of the fixed-weight aggregative (Laspeyres) type, and combines unit values calculated from the monthly import statistics with specified wholesale or other price quotations. These latter quotations are used where inadequate quantity reporting or insufficiently homogeneous items in the trade statistics prevent the obtaining of sufficiently representative unit value series. The volume index is derived by dividing the value index by the corresponding price index, and is, therefore, of the currently-weighted (Paasche) type. These indexes are computed with 1948 as an interim reference base pending conversion to the Bureau's official post-war reference base (1949).

In computing the price index certain adjustments were made to the regular grouping of commodities used in the trade statistics, and all three indexes are presented on the basis of these adjusted groups. The chief adjustments are as follows: the two groups "agricultural and vegetable products" and "animals and animal products" have been combined into one group now titled "agricultural and animal products"; the sub-group "rubber and its products" (1678-1732) and the item "advertising matter" (4291) have been transferred to the "miscellaneous products" group; the item "arms, etc., British or N.A.T.O. countries" (9196) has been deducted from the "miscellaneous products" total and the grand total; three "ships" items (9155-57) have been transferred to the "iron and steel and their products" group; and a few other adjustments designed to improve group classification by component material have been made.

These indexes are currently computed from the original data for months, quarters and calendar years. Approximate indexes for other periods may be obtained by averaging the monthly values. Although such indexes will be less accurate than would result from a separate computation based on the original data, the margin of error is insufficient to necessitate a lengthy separate computation.

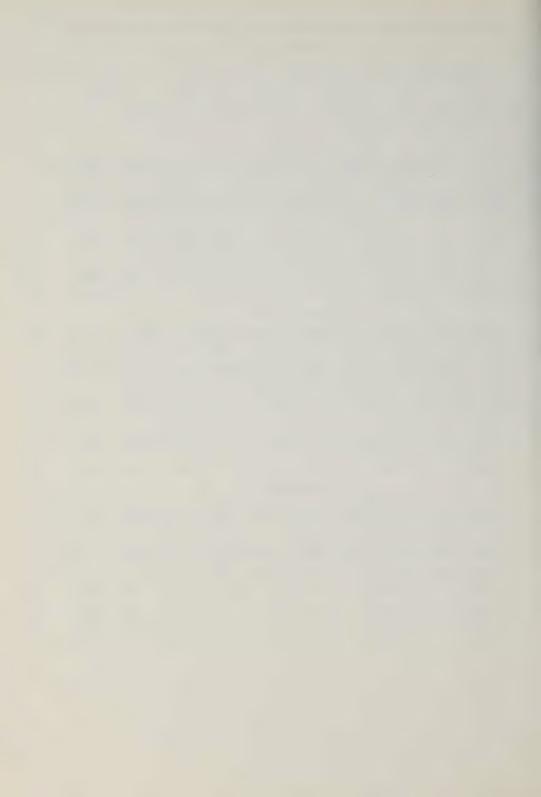

A complete record of these series by months for the post-war period is published in issues of Volume I of the annual report "Trade of Canada". Some additional commodity information appears in issues of the "Review of Foreign Trade". Details of the computation of the price indexes are given in D.B.S. Reference Paper, No. 8, 1950, titled "Export and Import Price Indexes by Months, July, 1945 – June, 1950 (1948=100)".

CHANGES IN IMPORT STATISTICAL CLASSIFICATION EFFECTIVE JULY 1ST, 1958

The changes in the Canadian Customs Tariff effective June 18, 1958, necessitated several changes in Canadian import statistics, especially in those relating to primary iron and steel. Many statistical classes formerly related directly to customs tariff items which were abolished and replaced by new tariff items, and it was not practical to continue these statistical classes past June 30. Modifications to some other tariff items required corresponding modifications in the content and description of other statistical classes, and these modifications were made with the same effective date.

The following list of changes in the import statistical classification is divided into four parts. The first deals with statistical classes which could not be continued after June 30, and which do not match closely any of the new classes established as of July 1. In this and subsequent reports for 1958 these classes will be re-numbered and presented under their new code numbers. The statistics shown for these classes will be cumulative figures for the period January 1 - June 30, 1958. The second part of the list deals with cancelled classes which will be included in either new or pre-existing classes. These classes, as such, disappear entirely from this and subsequent reports, but cumulative totals for the period January 1 - June 30, 1958, are included with totals for the classes indicated. The third part deals with the new classes established as of July 1. Cumulative figures for these classes cover only the elapsed period of 1958 subsequent to July 1, except for those classes mentioned in part 2 of the list, and each of these classes will bear an appropriate footnote reference in reports covering the last six months of 1958. The fourth part of the list shows in full the new readings of those statistical classes where modifications in content (or changes in the wording of relevant tariff items) made these desirable.

1. Classes Discontinued After June 30, and Re-numbered for Inclusion in Current Reports (the cumulative figures shown under the new code numbers relate only to the period January 1 - June 30, 1958):

Former	New	Former	New	Former	New
Class	Code	Class	Code	Class	Code
5020	5901	5117	5918	5152	5935
5021	5902	5120	5919	5153	5936
5022	5903	5121	5920	5154	5937
5071	5904	5122	5921	5161	5938
5072	5905	5124	5922	5162	5939
5073	5906	5126	5923	5164	5940
5074	5907	5127	5924	5167	5941

EXPLANATORY NOTES	2
KEY TO ABBREVIATIONS OF COUNTRIES	3
SUMMARY TABLES:	
Imports into Canada for Consumption, by Countries	· 4
Imports into Canada for Consumption, by Main Groups	6
DETAILED TABLES:	
Imports for Consumption, by Articles and Countries:	
Agricultural and Vegetable Products (except Chemicals, Fibres and Wood):	Class Number
A - Mainly Food	1 to 390
B — Other than Food	1501 to 1846
Animals and Animal Products (except Chemicals and Fibres)	2012 to 2348
Fibres, Textiles and Textile Products	3001 to 3576
Wood, Wood Products and Paper	
Iron and Its Products	
Non-Ferrous Metals and Their Products (except Gold)	
Non-Metallic Minerals and Their Products (except Chemicals)	
Chemicals and Allied Products	
Miscellaneous Commodities	9000 to 9275

VALUE AND VOLUME at end of report

EXPLANATORY NOTES

- 1. Source of Data. Statistics of imports are based upon the declarations of importers (import entries) as subsequently checked by customs officials.
- 2. Valuation. The value of goods imported is the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing on the date at which the goods were actually despatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f.o.b. point of shipment in the country of export.
- 3. Units of Quantity. Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are items such as "engines, gas, n.o.p., and parts" which show a quantity in "number" as well as value. In these items the "number" refers only to the number of substantially complete articles imported, while the value includes also the value of any parts of the article imported. For such items the average value per unit cannot be ascertained.

- 4. Coverage. Statistics of imports include all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series, therefore, includes goods which are cleared by customs immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.
- 5. Exclusions. Import statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the article. A small amount of gold scrap in the form of jewellers' sweepings is also included. Some goods for the use of United States forces stationed at treaty bases in Canada are excluded, as are ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, and Canadian-owned military equipment returned to Canada.
- 6. Countries Credited. Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. This class of imports is credited to the country in which the goods originated.

- 7. Time Periods. Import statistics for any month include all goods declared on import entries received at the Bureau of Statistics during the calendar month in question.
- 8. Abbreviations. Many descriptions of countries and articles used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all articles appear in Volume III of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for".
- 9. Revisions. All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.

Value, Price and Volume Indexes of Imports for Consumption

The following table gives index numbers of the declared (statistical) value of imports for consumption by months, and of the unit value (price) and volume of these imports. The value index expresses the value of imports in a given month as a percentage of the monthly average in the base year. The price index is of the fixed-weight aggregative (Laspeyres) type, and combines unit values calculated from the monthly import statistics with specified wholesale or other price quotations. These latter quotations are used where inadequate quantity reporting or insufficiently homogeneous items in the trade statistics prevent the obtaining of sufficiently representative unit value series. The volume index is derived by dividing the value index by the corresponding price index, and is, therefore, of the currently-weighted (Paasche) type. These indexes are computed with 1948 as an interim reference base pending conversion to the Bureau's official post-war reference base (1949).

In computing the price index certain adjustments were made to the regular grouping of commodities used in the trade statistics, and all three indexes are presented on the basis of these adjusted groups. The chief adjustments are as follows: the two groups "agricultural and vegetable products" and "animals and animal products" have been combined into one group now titled "agricultural and animal products"; the sub-group "rubber and its products" (1678-1732) and the item "advertising matter" (4291) have been transferred to the "miscellaneous products" group; the item "arms, etc., British or N.A.T.O. countries" (9196) has been deducted from the "miscellaneous products" total and the grand total; three "ships" items (9155-57) have been transferred to the "iron and steel and their products" group; and a few other adjustments designed to improve group classification by component material have been made.

These indexes are currently computed from the original data for months, quarters and calendar years. Approximate indexes for other periods may be obtained by averaging the monthly values. Although such indexes will be less accurate than would result from a separate computation based on the original data, the margin of error is insufficient to necessitate a lengthy separate computation.

A complete record of these series by months for the post-war period is published in issues of Volume I of the annual report "Trade of Canada". Some additional commodity information appears in issues of the "Review of Foreign Trade". Details of the computation of the price indexes are given in D.B.S. Reference Paper, No. 8, 1950, titled "Export and Import Price Indexes by Months, July, 1945 – June, 1950 (1948=100)".
